

Product Requirements & Technical Specifications Document

Mobile Application Optimization Blueprint

Document Reference	PRD-TSD-APP-OPT-REPLIT
Version / Status	Current Version — Draft for Active Iteration
Author / Role	Senior Software Engineer & Platform Architect
Target Environment	Replit AI Development Environment
Last Updated	June 18, 2026

Table of Contents

Section ID	Description	Type
1.0	Executive Summary & Architectural Scope	Context
2.0	Global Core Infrastructure: Android Icon Fix	Technical Spec
3.0	Feature Module A: Homepage Enhancements	Functional Requirements
4.0	Feature Module B: Opportunities & Booking Workflows	Functional Requirements
5.0	Feature Module C: The New "Spend" Tab (Formerly "Care" Tab)	Functional Requirements
6.0	Data Elements & Target State Validation Mapping	Technical Mapping

1.0 Executive Summary & Architectural Scope

This document details the complete layout modifications, asset repairs, and navigation workflows required for the Care Align Solutions mobile application interface. The instructions are tailored specifically for iteration within the Replit AI workspace.

The objective of these updates is focused on immediate UI optimization and specific feature additions:

- **Infrastructure Correctness:** Resolve internal asset linking configurations causing icon glyph loading failures when simulated in Android layouts.
- **Conversion & Clarity Optimization:** Streamline presentation layers regarding financial data blocks, optimizing visual density for user point incentives and plan deductibles.
- **Frictionless Scheduling:** Outline explicit interface routing rules to govern selection-to-appointment creation states.

2.0 Global Core Infrastructure: Android Icon Fix

Defect Overview: When rendering pages within the Android device simulator panel, icon text formatting blocks fail to map correctly to underlying font packages. This results in visual glyph placeholders loading as plain hollow boxes (□), as evidenced in UI captures (icons looking like boxes.png).

Infrastructure Defect: Resolve Android Font Glyph Compiling Fault

BUG FIX

As a Mobile Workspace Build Engine, I must link appropriate typographical font sets inside the project file layout, so that icons generate properly instead of dropping to broken container squares.

ACCEPTANCE CRITERIA & IMPLEMENTATION INSTRUCTIONS:

- **Asset File Location Verification:** Ensure standard font resource files (such as `.ttf` or `.otf` sets associated with icon rendering) are explicitly mounted inside the project bundle pathing under `android/app/src/main/assets/fonts/`.
- **Workspace Build Script Sync:** Update the target build dependency logic (e.g., your script or `build.gradle` rules within the file tree) to track, load, and cache font glyph files when building out the Android client view.
- **Code Verification:** Confirm that components referencing these elements utilize explicit, matching style properties to ensure correct mapping on reload.

3.0 Feature Module A: Homepage Enhancements

The application landing flow requires layout adjustments to balance navigation blocks with direct records collection fields.

User Story A.1: Opportunity Status Distinction UI UPDATE

As an active user, I want new and missed health opportunities to have separate, clear color indicators so I can review them instantly.

ACCEPTANCE CRITERIA:

- **New Opportunities Styling:** Adjust the background layout container of the "New Opportunities" notification card to display a soft desaturated light green hue (LIGHT GREEN).
- **Missed Opportunities Styling:** Adjust the background container of the "Missed Opportunities" block to present a distinct light red hue (LIGHT RED).
- **Interactive Routing:** Enable active tap listeners on the Missed Opportunities container. Upon engagement, trigger a router path redirection sending the viewer immediately to the separate *Missed Opportunities Screen*.

User Story A.2: Dual-Onboarding Action Layout UI UPDATE

As an onboarding user, I want compact, structured buttons for initial setups so that the interface fits clean above the fold.

ACCEPTANCE CRITERIA:

- **Dimension Scaling:** Constrain the existing layout footprint (reducing absolute padding and vertical margins) of the "Get Started" panel block to make it more compact.
- **Component Splitting:** Mount an adjacent secondary target action card element alongside the optimized control titled exactly: **"Connect Your Health Data"**.
- **Symmetrical Formatting:** Render both blocks alongside each other uniformly using a matching aspect grid, preserving identical border metrics.

User Story A.3: Recommended Section Optimization UI UPDATE

As a user navigating daily tasks, I want condensed descriptions in the recommendation panels so I can see my points list without excessive scrolling.

ACCEPTANCE CRITERIA:

- **Text Box Compacting:** Scale down the typographic container sizing within the "Recommended for you" focus area significantly, compacting interior spacing constraints to minimize screen area.
- **Component Preservation:** Keep the lower lists containing reward point values fully anchored and static, preventing items from wrapping out of bounds or clipping improperly.

4.0 Feature Module B: Opportunities & Booking Workflows

These rules normalize filtering terms and construct operational flows linking selections with booking states. *Note: The financial tracking, quick actions, and YTD metrics modifications detailed in Section 5.0 belong strictly to the "Spend" (formerly "Care") tab, completely distinct from this Opportunities section.*

User Story B.1: Color Continuity & Category Rules UI UPDATE

As a system user, I want structural text elements and filters to use cohesive naming conventions and palettes.

ACCEPTANCE CRITERIA:

- **Theme Consistency:** Set the link styling color for "Missed Opportunities" to utilize the exact light red hex representation established on the main Dashboard framework layouts.
- **Filter Synchronization:** Map individual filtering options to reflect section header values word-for-word, explicitly: Care Site Alternative , Care Protocol Compliance , etc.
- **Icon Mapping:** Integrate an explicit icon or category symbol positioned immediately to the left of each specific structural text filter.

User Story B.2: Target Bottom Tab Integration NAVIGATION

As a user seeking to maximize points, I want immediate access to comprehensive logs of discovery tools directly from the global navigation menu.

ACCEPTANCE CRITERIA:

- **Bottom Nav Extension:** Append an additional primary tab interface target node to the global bottom layout navigation component.
- **Naming & Asset Assignment:** Define the interface title text exactly as "**Find More Opportunities**" and associate an active search icon vector asset.

User Story B.3: Sequential Selection and Scheduling Pipeline INTERACTION FLOW

As an eligible program subscriber, I want a structured choice validation flow when I tap on an incentive item, so I can understand my options before selecting an appointment route.

ACCEPTANCE CRITERIA:

- **Tier 1 Trigger:** Tapping on an individual listed opportunity must change the application state, loading an interstitial details screen that lists path variants paired with their corresponding incentive points.
- **Tier 2 Trigger:** When a user checks a preferred variant option, push an active transition event to present a deep scheduling prompt.
- **Action Interface:** This layout state must expose two main choice blocks:
 1. Schedule an appt for me
 2. Schedule an appt myself

5.0 Feature Module C: The New "Spend" Tab (Formerly the "Care" Tab)

Tab Context Clarification: All requirements specified within this module—including layout resizing, quick action changes, and new financial segments—apply strictly to the application's core **Care Tab** (now re-branded to **"Spend"**) as captured in user layout images (`spend.jpeg`). These changes do not alter the separate Opportunities Tab layouts.

Prior "Care" Tab Layout

- Primary Tab String: "Care"
- Visual Weight: Deep teal card container block housing deductible tracks.
- Quick Links Setup: Mixed tools for tracking and automated care routing.
- Financial Focus: Out-of-pocket maximum tracking blocks only.

Updated "Spend" Tab Layout

- Primary Tab String: **"Spend"**
- Visual Weight: Compressed teal header area with structured sizing.
- Quick Links Setup: Focused links managing integrated external provider links.
- Financial Focus: Incorporates localized sub-ledgers tracking Paid and Copay structures.

User Story C.1: Re-brand Core "Care" Tab to "Spend" UI UPDATE

As an insurance plan subscriber, I want my financial tracking screen labeled under "Spend" instead of "Care" so that I instantly understand the view's financial purpose.

ACCEPTANCE CRITERIA:

- **Text Node Update:** Swap out the active text layout parameter on the page header from "Care" to **"Spend"**.
- **Bottom Menu Labeling:** Update the corresponding menu selection string inside the bottom tab controller to read **"Spend"**, keeping the core shield asset icon outline unchanged.

User Story C.2: "Your Benefits" Header Footprint Optimization UI UPDATE

As a mobile user, I want compressed dashboard widgets so I can see financial breakdowns below the fold without scrolling.

ACCEPTANCE CRITERIA:

- **Card Compacting:** Restrict and scale down the outer margins and background padding limits of the main teal **"Your Benefits"** display element to make it physically smaller on the screen layout.
- **Progress Ring Scaling:** Scale down the outer radius bounding parameters of the "Individual Deductible" circular chart overlay by roughly 15-20%, making layout font scales adjust down nicely to stay readable within the path bounds.

User Story C.3: Clean Quick Action Refactoring DATA REFACTOR

As an integrated patient, I want quick actions focused on active insurance history and health data access rather than manual entry logging tools.

ACCEPTANCE CRITERIA:

- **Retain:** Maintain the first column card element, setting its text identifier label explicitly to read **"View Claims YTD"**.
- **Deprecate:** Permanently drop and delete the secondary and tertiary action selections from the container layout matrix: Get automated referrals and Log upcoming care .
- **Inject:** Insert a new action button card target in their place, displaying the copy label string exactly: **"Connect to Health Records"**.

User Story C.4: Year-to-Date (YTD) Spending Segment Ledger NEW FEATURE

As a consumer, I want an explicit breakdown section detailing my paid out-of-pocket balances vs copay histories so that I understand where my funds were applied.

ACCEPTANCE CRITERIA:

- **Interface Injection:** Place a brand new metrics grouping segment layout beneath the Quick Actions container row, initialized with the heading label title *****YTD Spending*****.
- **Sub-Ledger Elements:** Inside this layout field, add two distinct breakdown panels containing static label strings:
 1. **Paid Amount:** Reflects overall basic provider funds cleared.
 2. **Copay:** Reflects cumulative point-of-service processing counts.

6.0 Data Elements & Target State Validation Mapping

The following validation matrix identifies exact component structural states intended to guide Replit AI code generation passes.

App Context View	Previous Setup Representation	Updated Target Configuration (Current Workspace Iteration)
Global Navigation	Standard tabs mapping to a legacy "Care" stack window.	Inject "Find More Opportunities" link block. Rename existing menu cell to "Spend" .
Android Configuration	Broken character font paths or glyph indexing errors.	Verify typography files exist inside project folder at <code>android/app/src/main/assets/fonts/</code> .
Homepage Cards	Neutral styling backgrounds covering options buttons.	"New" displays LIGHT GREEN . "Missed" displays LIGHT RED + Router Navigation.
Opportunities Filters	Generic descriptive text strings.	Match headers perfectly: Care Site Alternative and Care Protocol Compliance.
"Spend" (Care) View Header	Large, primary green graphics tracking chart elements.	Make the "Your Benefits" section smaller. Progress circle bounds decreased to increase vertical screen real estate.
Spend Quick Actions	"View All Claims", "Get Automated Referrals", "Log Upcoming Care"	Keep "View Claims YTD" . Delete <i>log upcoming care & get automated referrals</i> . Replace with "Connect to Health Records" panels.
Spend Data Footer	Layout terminates at the quick actions grid row block.	Render new "YTD Spending" block containing explicit Paid Amount and Copay data tags.
